CAREER SUMMARY

Data Engineer with 2+ years of experience working on cloud data engineering projects involving ETL pipelines, data migration, and large-scale data processing. Hands-on experience building and supporting Azure data pipelines using ADF, PySpark, Databricks, ADLS Gen2, and SQL, with a focus on data ingestion, transformation, validation, and troubleshooting.

TECHNICAL SKILLS

Languages

SQL, Python, PySpark

Cloud & Data Engineering

Azure Data Factory, Azure Databricks, ADLS Gen2, Delta Lake, Unity Catalog, Azure Key Vault, Git, Self-hosted Integration Runtime, ETL Pipelines

Libraries & Tools

Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow (Basic), Git

Databases

SQL Server, MySQL, Teradata

Data Processing & Analytics

Data Cleaning, Data Validation, ETL, Exploratory Data Analysis (EDA)

Visualization

Power BI, Excel

WORK EXPERIENCE

Amigo Infotechs, Data Engineer
Client: Arrow Electronics, Asphalte

06/2024 – Present | Bengaluru, Karnataka

PROJECTS

Arrow Data Migration

01/2026 – Present

Arrow Electronics specializes in distribution and value added services relating to electronic components and computer products. Migrating the Teradata Database to Azure Synapse. Since Azure Synapse combines data warehousing and Big Data analytics to ingest, prepare, manage, and serve data for immediate BI and machine learning needs.

Key Responsibilities:

- Migrate On-premises data which resides on Teradata Database to cloud (Synapse database)
- Used PySpark to extract data from Teradata and generate Parquet files on the Linux/Spark environment for staging. (Teradata JDBC driver is used to connect with Spark server to Teradata server).
- Migrate the data to ADLS Containers.
- Ingestion was done using synapse pipelines (Automated pipelines were created using different activities like Get Metadata, Lookup, For Each, Stored Procedures, Copy Data, filter etc. Parameterization is used to automate the pipelines.
- Validation through Automated Pipelines (Pipeline used to validate the data between Source (Teradata) & Target (Synapse)).

Asphalte End-to-End Azure Retail Data Platform

08/2024 – 12/2025

Asphalte is a European D2C fashion company following a pre-order business model, generating data across e-commerce, customers, marketing, production, inventory, and supply chain. Built and maintained Azure data pipelines to integrate data from multiple sources into a centralized analytics platform using ADF, ADLS Gen2, Databricks, PySpark, and Delta Lake.

Key Responsibilities:

- Developed ADF pipelines to ingest data from SQL databases, SFTP files, REST APIs, and application sources into ADLS Gen2 for initial and incremental loads.
- Implemented watermark-based incremental processing using parameterized ADF pipelines.
- Developed PySpark/Spark SQL transformations in Databricks for data cleansing, standardization, deduplication, schema validation, and business rules.
- Contributed to assigned Gold fact and dimension datasets using Delta Lake and incremental MERGE operations.
- Performed source-to-target validation using record counts, null/duplicate checks, schema validation, and rejected-record handling.
- Supported production troubleshooting using ADF Monitor and Databricks logs, including failure investigation, reruns, and downstream validation.

EDUCATION

MSc Data Science, Manipal Academy Of Higher Education
CGPA - 9 / 10

2024 – 2026 | Karnataka, India

B. E In Civil Engineering, SJC Institute of Technology
CGPA - 8.26 / 10

2016 – 2020 | Karnataka, India

CERTIFICATIONS

Certified Data Science Professional 
Bootcamp

Google Advanced Data Analytics 
Google - Coursera

Exploratory Data Analysis for Machine Learning 
IBM - Coursera
